

# Simplicial surfaces in GAP

Markus Baumeister

?? .08.2017

- 1 General polygonal complexes by incidence geometry
- 2 Edge colouring and group properties
- 3 Abstract folding

- 1 General polygonal complexes by incidence geometry
- 2 Edge colouring and group properties
- 3 Abstract folding

# Motivation

Goal: simplicial surfaces (and generalisations) in GAP

⇝ examples of **polygonal complexes**

# No embedding

We do not work with embeddings (mostly)

- is very hard to compute
- if often unknown for an abstractly constructed surface
- is different from *intrinsic structure*

⇒ lengths and angles are not important

↪ incidence structure is intrinsic

# Incidence structure

- set of vertices  $\mathcal{V}$

- set of edges  $\mathcal{E}$

- set of faces  $\mathcal{F}$

- transitive relation  $\subseteq (\mathcal{V} \times \mathcal{E}) \uplus (\mathcal{V} \times \mathcal{F}) \uplus (\mathcal{E} \times \mathcal{F})$
