

Simplicial surfaces in GAP

Markus Baumeister

?? .08.2017

- 1 General polygonal complexes by incidence geometry
- 2 Edge colouring and group properties
- 3 Abstract folding

- 1 General polygonal complexes by incidence geometry
- 2 Edge colouring and group properties
- 3 Abstract folding

Motivation

Goal: simplicial surfaces (and generalisations) in GAP

⇝ examples of **polygonal complexes**

No embedding

We do not work with embeddings (mostly)

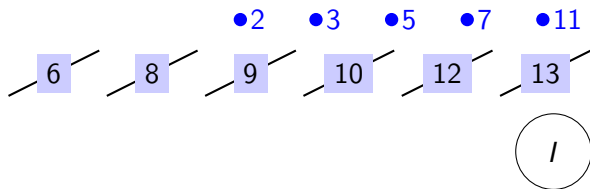

- is very hard to compute
- if often unknown for an abstractly constructed surface
- is different from *intrinsic structure*

⇒ lengths and angles are not important

↪ incidence structure is intrinsic

Incidence structure

- set of vertices \mathcal{V}
- set of edges \mathcal{E}
- set of faces \mathcal{F}

- 1 General polygonal complexes by incidence geometry
- 2 Edge colouring and group properties
- 3 Abstract folding

- 1 General polygonal complexes by incidence geometry
